

Create Hidden Pages

Within Bizzabo you can create hidden web pages. This means the web page is not accessible in your navigation bar and someone would need that direct link to access the content on that page. You might know these as “dark pages”.

This can be useful when curating content, ticket types, or other information that you want to control access to.

1. Navigate to Marketing & Web > Event Website > Website Editor > Edit Website
2. Choose Pages from the left-hand menu
3. Click “Add New Page” and give it a title
4. Click the ‘Hide’ button. The indicator will change to grey
5. To get the direct link, click the cog icon on the top right of the hidden page. Next click the link icon that appears below the title of the hidden page.
6. A pop up will appear with the direct link to your hidden page.

Your page is hidden, not password protected

It’s important to remember that anyone with this link will be able to access the webpage. Bizzabo does not support password protection or other privacy measures for hidden pages, so please think about who you’re sending the link to.
